

Investigation of corrosive gas generating environments

Utilization of Silver Scales™ in areas where corrosive gases (hydrogen sulfide & sulfur) are expected to be generated

Paper mills

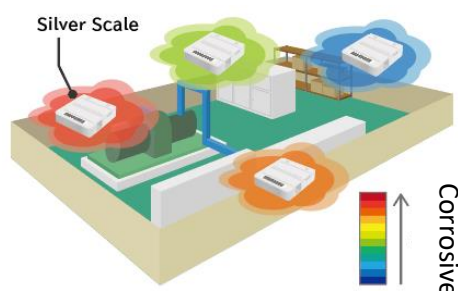

Sewage treatment plants

Hot spring towns, etc.

By installing multiple Silver Scales™, it is possible to analyze corrosive gases at multiple points at the same time.

1

Investigation of the indoor environment

By installing multiple Silver Scale™ units, it will be easy to simultaneously analyze levels of corrosive gases in multiple areas.

2

Operation and Maintenance

Measurement Functions

By using the associated app to monitor corrosion, electronics' condition can be easily managed. Corrosiveness category can be measured in accordance with ISO11844-1, you can easily judge the corrosive category.
